INNO

Current Release: Millennium R

Download the Offline Circulation Software

You can download the **offline.exe**, **offline4.exe**, **miloffline41.exe**, **miloffline5.exe**, **offline141.exe**, and **offline2005a.exe** files here. After downloading the appropriate file, you will run it to install the Offline Circulation software on a PC running Millennium Circulation. To do this, follow the instructions below.

You can print these instructions by selecting the **Print** button on your browser's toolbar or by selecting the **File** menu and the **Print** option.

Instructions

Before you begin, make sure that you know the IP address of the library's Innovative machine; the system prompts you for this information as part of the installation. Additionally, you need to know what version of the software your system is running so you can download the correct version of the client. To find the version, follow these steps in the character-based system, starting at the Main Menu.

> **M > MANAGEMENT information**
>   **I > INFORMATION about the system**
>   **F > FILE information**
>   Note the Innovative software version number labeled "Software Release."

You *must* follow this procedure for each PC that will run the Workstation software, even if the PC will run the software from a network directory.

If your server is running	then install
Release 2000	**offline.exe**
Release 2001	**offline4.exe**
Release 2001 Update A through Release 2002 Phase 1	**miloffline41.exe**
Release 2002 Phase 2	**miloffline5.exe**
Release 2002 Phase 3 and Millennium Silver	**offline141.exe**
Millennium Silver, Release 2005 LE, and Release 2005	**offline2005a.exe**

- Millennium Silver supports both **offline141.exe** and **offline2005a.exe**. If your library is on Millennium Silver and you are installing Offline Circulation for the first time, download **offline2005a.exe**.

- Versions 4.0 and 4.1 of the Offline Circulation software (**offline4.exe** and **miloffline41.exe**) include and automatically install JRE 1.3. **offline141.exe** and **offline2005a.exe**

automatically install JRE 1.4.1 (required for Release 2002 Phase 3 and later releases).

1. Download the appropriate file to a temporary directory on your PC (for example, C:\TEMP). This directory can be any temporary directory you choose. When you click on the download link above, your browser should open a **Save As** dialog, allowing you to specify which directory to use for saving the file.

   If the system does not prompt you to choose a directory: after the file downloads, copy it from the directory into which the browser placed the file into a temporary directory.

2. From the Windows desktop main menu, choose the **Start | Run…** command. Enter the following command in the Open box; specify the directory into which you downloaded the software.

   ```
   c:\temp\offline.exe
   ```

   or

   ```
   c:\temp\offline4.exe
   ```

   or

   ```
   c:\temp\miloffline41.exe
   ```

   or

   ```
   c:\temp\miloffline5.exe
   ```

   or

   ```
   c:\temp\offline141.exe
   ```

   or

   ```
   c:\temp\offline2005a.exe
   ```

   Choose **OK** to proceed.

   The setup program begins to load and displays a series of dialog boxes. Some of these dialogs prompt you for installation settings, though most dialogs have the recommended settings already entered. To proceed to the next step in the setup, choose **Next**; to return to a previous step, choose **Back**. Choose **Cancel** to end the installation procedure without installing the software.

   The setup begins with the Welcome dialog. After reading the information in this dialog, choose **Next** to continue.

3. Read the Software License Agreement dialog. If you accept all of the terms of the license agreement, choose **Yes**. If you don't agree, choose **No**, and Setup will close without installing the software.

4. In the Installation Path dialog, specify the directory to which the Millennium Offline Circulation files will be copied. The default directory is C:\Millennium. Choose **Next** to proceed.

5. The Folder Name dialog displays. The name in the Program Folders box is the menu under **Start | Programs** to which the Millennium Offline Circulation name will be added. Accept the default folder or choose a different folder. Choose **Next** to continue.

6. In the IP Address dialog, enter the IP address of your Innovative Server. Choose **OK** to continue.

7. In the Millennium Offline Circulation dialog, review the installation settings that you have selected.

    To change a setting, choose **Back** to return to the appropriate dialog, and re-enter the desired setting. When you are satisfied with the installation settings, choose **Next** to begin copying the Workstation files.

8. If the setup detects that the appropriate version of the Java Runtime Environment is already installed on your PC, you will be prompted to reinstall the JRE component. Choose **No** to continue without reinstalling the JRE component or **Yes** to reinstall it.

9. The Setup Complete dialog displays. If you want to view the Readme file, leave the "View READ ME file now" box checked. If not, uncheck the box. Choose **Finish**.

The Millennium Offline Circulation installation is complete. You might need to restart Windows in order for it to reload any system files that were updated during the setup. Refer to the Millennium Circulation User Manual for information about using this product.
